

Create a Yearbook in 5 easy steps...

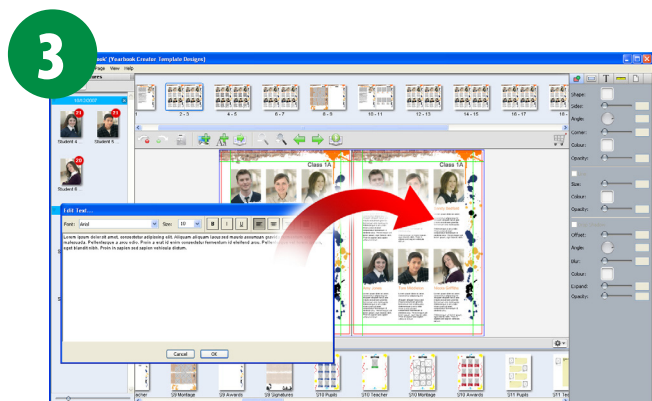

1. Choose a theme

Choose a theme for your yearbook from the Page Styles library. Drag and drop page styles onto the yearbook pages in the page preview panel. **TIP: Why stick to one theme? Mix and match the themes any way you want!**

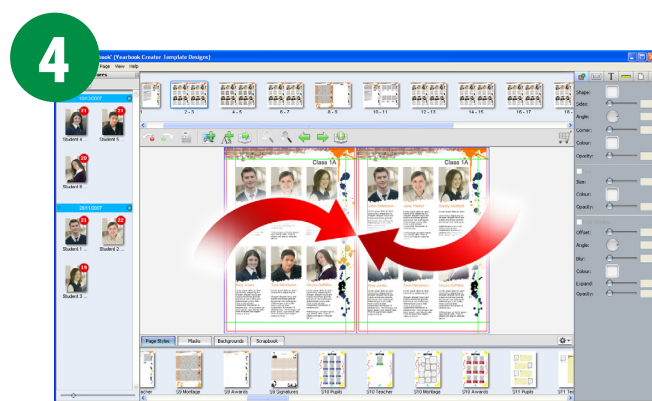

2. Add your pictures

Add your pictures to the pictures panel and then drag them into the picture boxes on your pages. **TIP: Organise your pictures into folders for each class so it is easy to find them when adding them to your yearbook.**

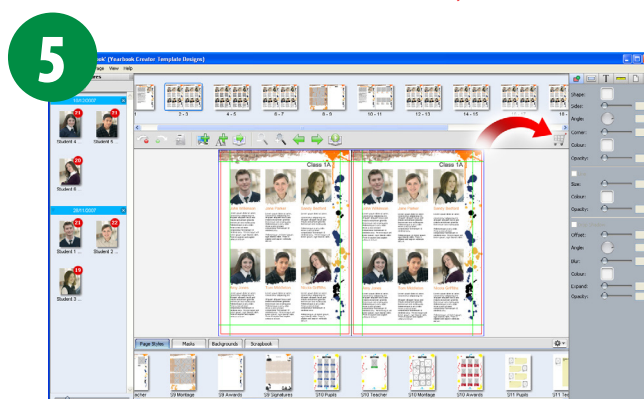

3. Add your text

Use the text editor to add text to your yearbook. Click any text box to add text to it. **TIP: You can type directly into the text editor or copy and paste from Word or a website.**

4. Customise

Change background colours, add background pictures, create your own page layouts, add mask effects and much more! **TIP: Be as creative as you want to – we have made Yearbook Creator even more fun to use by allowing you to change more of the page style elements.**

5. Order

Click the shopping cart icon when you are ready to order your yearbook. Yearbook Creator will check and create your files – if you have access to the internet you can upload your files directly to SPC. If you do not have internet connection send your files to us on CD, DVD or USB for us to create your proof. **TIP: Do not move or copy any other files that are used by Yearbook Creator, including any files ending in .prj**
